2024-09-25

1. Create a vector using : operator

a. Sequence from -5 to 5. Write the R code and its output.

Describe its output.

```
seq(-5,5)
```

```
## [1] -5 -4 -3 -2 -1 0 1 2 3 4 5
```

Using sequence it gave out 11 elements ranging from -5 to 5.

b. `x <- 1:7`. What will be the value of x?

```
x <- 1:7  
x
```

```
## [1] 1 2 3 4 5 6 7
```

The value of x is 1, 2, 3, 4, 5, 6, 7.

2. Create a vector using seq() function

a. `seq(1, 3, by=0.2)` # specify step size Write the R script and its output. Describe the output.

```
seq(1, 3, by=0.2)
```

```
## [1] 1.0 1.2 1.4 1.6 1.8 2.0 2.2 2.4 2.6 2.8 3.0
```

The output given was the starting from 1 it adds an indentation of 0.2.

3. A factory has a census of its workers. There are 50 workers in total. The following list shows their ages:

34, 28, 22, 36, 27, 18, 52, 39, 42, 29, 35, 31, 27, 22, 37, 34, 19, 20, 57, 49, 50, 37, 46, 25, 17, 37, 43, 53, 41, 51, 35, 24, 33, 41, 53, 40, 18, 44, 38, 41, 48, 27, 39, 19, 30, 61, 54, 58, 26, 18.

```
ages <- c(34, 28, 22, 36, 27, 18, 52, 39, 42, 29, 35, 31, 27, 22, 37, 34, 19, 20, 57, 49, 50, 37, 46, 25, 17, 37, 43, 53, 41, 51, 35, 24, 33, 41, 53, 40, 18, 44, 38, 41, 48, 27, 39, 19, 30, 61, 54, 58, 26, 18)
```

a. Access 3rd element, what is the value?

```
ages[3]
```

```
## [1] 22
```

The value of the 3rd element is 22.

b. Access 2nd and 4th element, what are the values?

```
ages[c(2, 4)]
```

```
## [1] 28 36
```

The value of the 2nd and the 4th elements is 28, and 36.

c. Access all but the 4th and 12th element is not included. Write the R script and its output.

```
ages[-c(4, 12)]
```

```
## [1] 34 28 22 27 18 52 39 42 29 35 27 22 37 34 19 20 57 49 50 37 46 25 17 37 43
## [26] 53 41 51 35 24 33 41 53 40 18 44 38 41 48 27 39 19 30 61 54 58 26 18
```

4. \*Create a vector `x <- c("first"=3, "second"=0, "third"=9)`. Then named the vector, `names(x)`.

a. Print the results. Then access `x[c("first", "third")]`. Describe the output.

b. Write the code and its output.

```
x <- c("first" = 3, "second" = 0, "third" = 9)
names(x)
```

```
## [1] "first" "second" "third"
```

```
x[c("first", "third")]
```

```
## first third
##      3      9
```

The output given was 3 and 9.

`gsub()` 5. Create a sequence `x` from `-3:2`. a. Modify 2nd element and change it to 0; `x[2] <- 0` x Describe the output.

b. Write the code and its output.

```
x <- -3:2
x[2] <- 0
x
```

```
## [1] -3 0 -1 0 1 2
```

The output was it sequence from -3 to 2 but at the 2nd element we converted it to 0 instead of 2.

6. \*The following data shows the diesel fuel purchased by Mr. Cruz

a. Create a data frame for month, price per liter (php) and purchase-quantity (liter). Write the R scripts and its output.

```
month <- c("Jan", "Feb", "March", "Apr", "May", "June")
price_per_liter <- c(52.50, 57.25, 60.00, 65.00, 74.25, 54.00)
purchase_quantity <- c(25, 30, 40, 50, 10, 45)

fuel_data <- data.frame(month, price_per_liter, purchase_quantity)

print(fuel_data)
```

```
##   month price_per_liter purchase_quantity
## 1   Jan           52.50                25
## 2   Feb           57.25                30
## 3 March           60.00                40
## 4   Apr           65.00                50
## 5   May           74.25                10
## 6  June           54.00                45
```

- b. What is the average fuel expenditure of Mr. Cruz from Jan to June? Note: Use 'weighted.mean(liter, purchase)'. Write the R scripts and its output.

```
# a. Creating the data frame
month <- c("Jan", "Feb", "March", "Apr", "May", "June")
price_per_liter <- c(52.50, 57.25, 60.00, 65.00, 74.25, 54.00)
purchase_quantity <- c(25, 30, 40, 50, 10, 45)

fuel_data <- data.frame(month, price_per_liter, purchase_quantity)

# Display the data frame
print(fuel_data)

##   month price_per_liter purchase_quantity
## 1   Jan           52.50                25
## 2   Feb           57.25                30
## 3 March           60.00                40
## 4   Apr           65.00                50
## 5   May           74.25                10
## 6  June           54.00                45

# b. Calculating the weighted average fuel expenditure
weighted_avg_expenditure <- weighted.mean(fuel_data$price_per_liter, fuel_data$purchase_quantity)

# Display the result
cat("The average is:", weighted_avg_expenditure, "PhP per liter\n")

## The average is: 59.2625 PhP per liter
```

7. \*R has actually lots of built-in datasets. For example, the rivers data “gives the lengths (in miles) of 141 “major” rivers in North America, as compiled by the US Geological Survey”.
- a. Type “rivers” in your R console. Create a vector data with 7 elements, containing the number of elements (length) in rivers, their sum (sum), mean (mean), median(median), variance(var), standard deviation(sd), minimum (min) and maximum (max). data <- c(length(rivers), sum(rivers), mean(rivers), median(rivers), var(rivers), sd(rivers), min(rivers), max(rivers))
- b. What are the results?
- c. Write the R scripts and its outputs.

```
data(rivers)
```

```
vector_data <- c(
  length = length(rivers),
  sum = sum(rivers),
  mean = mean(rivers),
  median = median(rivers),
  variance = var(rivers),
  sd = sd(rivers),
  min = min(rivers),
  max = max(rivers)
)
```

```
print(vector_data)
```

```
##      length      sum      mean      median  variance      sd
##  141.0000 83357.0000  591.1844   425.0000 243908.4086  493.8708
##      min      max
##  135.0000 3710.0000
```

The results are given its descriptions.

8. The table below gives the 25 most powerful celebrities and their annual pay as ranked by the editions of Forbes magazine and as listed on the Forbes.com website.

- a. Create vectors according to the above table. Write the R scripts and its output.

```
# a. Create vectors for celebrity names, power rankings, and pay
celebrity_names <- c("Tom Cruise", "Rolling Stones", "Oprah Winfrey", "U2", "Tiger Woods",
  "Steven Spielberg", "Howard Stern", "50 Cent", "Cast of the Sopranos",
  "Dan Brown", "Bruce Springsteen", "Donald Trump", "Muhammad Ali",
  "Paul McCartney", "George Lucas", "Elton John", "David Letterman",
  "Phil Mickelson", "J.K Rowling", "Bradd Pitt", "Peter Jackson",
  "Dr. Phil McGraw", "Jay Lenon", "Celine Dion", "Kobe Bryant")
```

```
power_ranking <- c(1:13, 14:25)
```

```
pay <- c(67, 90, 225, 110, 90, 332, 302, 41, 52, 88, 55, 44, 55,
  40, 233, 34, 40, 47, 75, 25, 39, 45, 32, 40, 31)
```

```
celebrity_names
```

```
## [1] "Tom Cruise"      "Rolling Stones"  "Oprah Winfrey"
## [4] "U2"              "Tiger Woods"    "Steven Spielberg"
## [7] "Howard Stern"    "50 Cent"        "Cast of the Sopranos"
## [10] "Dan Brown"       "Bruce Springsteen" "Donald Trump"
## [13] "Muhammad Ali"    "Paul McCartney"  "George Lucas"
## [16] "Elton John"      "David Letterman" "Phil Mickelson"
## [19] "J.K Rowling"     "Bradd Pitt"     "Peter Jackson"
